Accessories and Finishing Profiles

1. If required the tiles can be sealed using a polyurethane floor sealer (please refer to out cleaning and maintenance guidelines) Sealing will help ease the cleaning of the tiles and will provide a gloss finish.

2. Regular light cleaning is better than infrequent heavy cleaning. We recommend using a micro-fibre mop system and twin compartment bucket (refer to our cleaning and maintenance guidelines). For larger areas use a rotary scrubber.

Cleaning & Maintenance

As with any floor regular cleaning will ensure maximum life and maintain its attractive appearance.

We recommend using a neutral pH cleaning detergent with a micro fibre mop. If available, and if sufficient access is available a rotary scrubber dryer is also suitable.

To maintain the floor in the best condition for as long as possible it is also worth considering applying two to three coats of either an acrylic or polyurethane sealer. Your local cleaning supply shop will stock these sealers
